

Response to Pet Food Label Modernization Draft Model Regulation Comments, January 2022

We appreciate the many people (regulators, industry members, veterinarians, and consumers) taking the time to review the draft model regulations document and provide your questions and thoughts that will help progress this label modernization project; with your help we are one step closer to seeing this through.

All comments were reviewed line by line and extensively discussed. Responses were formed by the subgroups and captured in the attached document.

Thank you to the regulators, representatives from industry and the organizations who worked hard to respond to each comment. An extensive amount of time by each work group member was put into reviewing the comments, addressing concerns, and putting together responses and updating the draft model regulations.

Regarding updates to PF11. Manufacturing or Distributor; Name and Address. The work group agreed that there was a need to modernize references. All other comments not specific to PFLM were not addressed, at this time those comments will be held and may be considered at a later date.
