

# Determination of Tylosin Residues in Large Animal Feeds by LC-MS/MS

**TOM PHILLIPS**  
**STATE CHEMIST SECTION**  
**MARYLAND DEPARTMENT OF**  
**AGRICULTURE**

# OVERVIEW

- **Method Developments**
  - **Initial Developments**
  - **Laboratory Methods**
- **Where do we go next?**

# Method Development and Modifications

- ❖ Method development under way:

- ❖ Tylosin:

- ❖ Developing and validating method for tylosin in animal feeds, and premixes, both at medicated levels and for residues.
    - ❖ Using Gramse method from Wisconsin Department of Agriculture as a starting point.
    - ❖ SCS will be evaluating SPE cleanups, as well as a variety of different extraction techniques.
    - ❖ Instrumental work will be done on the LC-DAD and LC-MS/MS.

# Tylosin

## LC-MS/MS Residue Method Development

- Developmental Strategies
  - Medicated vs. residue levels
    - Do we need different extraction, clean-up and detection methods?
  - AAFCO method needs requirements
    - Accuracy
    - Applicability
    - DL, QL
    - Precision – repeatability and reproducibility
    - Selectivity and performance

# Tylosin

## LC Method Development

- Extraction and clean up methods
  - Extraction solvent – currently using methanol
    - QuEChER'S modifications
    - Other solvents, ACN, or combinations
    - Evaporation step without clean up
    - Evaporation step with clean up
    - ASE technique
- Cleanup
  - QuEChER'S modifications
  - Evaluate the use of different SPE packings
    - HLB, DSC-18, DSC-CN, Envi-18, PSA, GCB or combinations of these

## Clean Swine Feed

Spike No.	Tylosin (ppm)	Grand Mean	With-in Day RSD	Between Day RSD	Total RSD	HorRAT	F-Value (2.773)
Spike 1	0.030	0.028	7.298	5.456	10.29	1.41	0.405
Spike 2	0.100	0.098	4.238	2.057	4.50	1.06	2.085
Spike 3	0.300	0.295	2.052	2.012	3.85	1.88	2.750
Spike 4	1.000	1.100	3.850	4.258	7.50	1.95	2.158

# Tylosin

## Where do we go from here?

- Further residue work
  - Determine robustness of method by varying LC conditions, extraction conditions, and clean-up conditions.
  - Have second analyst conduct SLV
- Medicated feeds/premixes
  - Gather more samples, i.e., ones with other drugs, especially
  - Determine robustness of method by varying LC conditions, extraction conditions, and clean-up conditions
  - Have second analyst conduct SLV

# Tylosin
